CARLOS SEGARRA GONZÁLEZ

Front-end web developer

I worked as a web developer in an online spearfishing shop, where I was able to manage the databases stock and the interaction with Google Merchant Centre and also, in an IT company performing website installation and its maintenance and custom support too (WordPress / Joomla).

Recently, I had been studied a Master's Degree in Renewable Energies and Energy Sustainability. In the final project, I decided to develop a photovoltaic solar system monitoring to improve its efficiency through IoT.

I consider myself a proactive person, adaptable, open-minded, easy-going and hard-working.
